

Integration Options

Empower Your Program with Motus Integrations

From information systems to expense management, Motus integrations effortlessly link your vehicle reimbursement program and risk mitigation with the platforms your teams are already familiar with.

Tailored to your requirements, our architecture simplifies integration, offering:

- Reduced Overhead Administrative Spend
- Automated Roster Updates to Improve Accuracy
- Enhanced Productivity
- Detailed and Accurate Vehicle Usage Data
- Heightened Security
- Scalability

Concur® Expense Integration

Motus seamlessly integrates with Concur Expense, providing enhanced visibility into employee expenses to optimize productivity. Our automated process efficiently approves and submits reimbursement reports to Concur on the same day, prioritizing your company's internal Travel and Expense (T&E) payment schedule and eliminating the need for previous direct deposit fund transfers. GPS mileage logs from the Motus App (which are fully IRS compliant) are seamlessly integrated into expense reports, whether generating a new report or connecting line items to existing ones, ensuring a streamlined and cohesive experience.

HRIS Integration

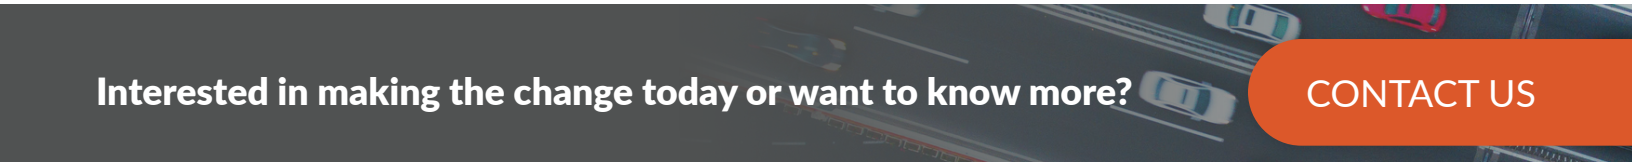

For vehicle program administrators, ensuring the accuracy and timeliness of employee information is crucial. Now, administrators no longer need to provide manual updates in cases of onboarding, terminations, leaves of absence, or address changes. Motus connects to all popular HRIS platforms, keeping this essential information up to date. Choose between two integration options, the Motus API or Secure File Transfer Protocol (SFTP), to best fit your IT architecture.

Single Sign-on (SSO) Integration

Eliminate the time-wasting frustration of “password fatigue,” administrative overhead and security risks. Employees log into your internal website and click a link that brings them directly to the Motus app, automating authentication and simplifying access. Working with our partner Ping Identity®, we take you through a well-designed process that is easy on your IT team.

Expedited and Simple Implementation

We work closely with your IT team to define the program specifications and hand-offs, work through building and testing, and support you throughout the entire launch process. We are always available afterwards as a resource to keep things running smoothly.
